Business Communication

Sennheiser Lavalier Mic Portfolio

It doesn't matter whether you're presenting to clients, delivering a keynote at a conference or lecturing to a theater full of students, you need to trust in your equipment and feel free and comfortable to move around and be yourself.

You can fulfill all of that and more with the wide range of lavalier microphones offered by Sennheiser – from our rugged presentation clip-on to the all-rounder for speech applications.

Sennheiser Business Communication microphones are small, unobtrusive, easy to attach and powerful; picking up nothing more than your voice and helping you to be heard without effort.

Lavalier portfolio

MKE 1 The first choice for professional presentations/conferences - a very discreet lavalier mic with a very small capsule and great sound quality

	Article number	Pattern	Colour	Connector	Capsule	Cable	Web link

Business Communication

Sennheiser Headmics (Headset Microphone) Portfolio

Sennheiser headset microphones feature a strong and sturdy design that's light enough not to impact your ability to present naturally, whether in a conference hall or lecture theater.

You can choose from a range of headmics that are lightweight, adjust perfectly to your head and come in the color and size you want.

Sennheiser believes that high speech intelligibility is the most important factor for headset microphones. With features like excellent feedback rejection, detachable wind/popshields and twist proof booms that can be attached to the left or right, Sennheiser headmics will never let you down.

If you need a hands-free system, the Sennheiser headset microphones offer you the right solution.

Sennheiser Gooseneck Portfolio

From conference keynotes to university lectures, a gooseneck microphone affords you the freedom to project your voice hands-free with the flexibility to position the mic where it's best suited for you to deliver the best quality audio.

Sennheiser's flexible goosenecks have a strong and stylish design. They are streamlined for seamless integration into any environment where speech matters and boast RF shielding against intermodulation from wireless devices and mobile phones.

You can rest easy and be prepared for any audio situation, no matter how challenging, and know that you will experience top-class speech intelligibility and reliability with Sennheiser gooseneck microphones.

Business Communication

Sennheiser Boundary Mics Portfolio

Boundary microphones are purposely designed to be flat and unobtrusive so they're not visible in meetings, board rooms and conference suites.

The location is key to a boundary microphone as it will produce natural sounding speech intelligibility with very little reverberation and echo when placed on (or within) boundary surfaces such as table tops.

The design and technology in all Sennheiser boundary microphone systems ensure speakers can move around a room without their voice dropping out and the variants with and without cables ensure a wider range of application possibilities.

Optically unobtrusive but powerful acoustically, our range of boundary mics give you a simple but reliable communication experience.

Sennheiser Capsule Portfolio

Reliability is essential whenever you step to the microphone.

Sennheiser's portfolio of microphone capsules range from unobtrusive lavaliers to stylish table mounted goosenecks and all boast high speech intelligibility and seamless integration into any environment where the spoken word matters most.

They're user-friendly, digitally operable and give you an authentic communication experience even in the most challenging of situations.

Business Communication

Microphone Pick-Up Patterns

Pick-up pattern	Clarification	Mic examples
OMNIDIRECTIONAL		
	Generally the best way to pick up sound. Microphone position has practically no effect on how/what sound is picked up. Due to possibility of feedback creation, omnidirectional microphones are not recommended to be used in sensitive environment with a lot of reflection – rooms with loudspeaker installations, glass walls etc	ME 9002 MMD 42-1 MKE 1 MKE 2 SL Headmic 1
CARDIOID		
	Perfect microphones for feedback sensitive environments (glass walls, loudspeaker installations, noisy environments). Sound quality changes depending on the position of the microphone. Perfect use cases when there are several speakers talking (debates, conversations between several interlocutors etc.) for separation if there are several speakers	ME 34 MMD 835 MM 435 MMD 935 ME 9004 MEB 104 MEB 114 MEG 40 HSP 4
SUPER-CARDIOID		
	Mainly used in gooseneck microphones as only smaller volume adjustments are needed which allows greater freedom of movement towards/from microphone. In comparison to other microphones, super-cardioid mics allow for bigger distance between speaker and mic itself	ME 35 MM 445 MMD 845 MME 865 MMD 945
SHOTGUN		
	Shotgun microphones are the most directed mics, allowing for a great noise reduction from the sides. Shotgun mics are used when the speaker/presenter/educator is relatively far away from/not right in front of the mic.	ME 36
